

## Utilities surveys and associated traffic management

In the first half of June, we will be undertaking surveys across our onshore development area to assess the locations of underground utilities. These surveys will be carried out using a ground penetrating radar on public highways and will require traffic management to enable this work to be carried out safely.

There are nine locations where this activity will be taking place as listed below. Work in each location will take one day and be carried out between the hours of 8am and 5pm.

- Sizewell Gap - Sizewell, 5 June
- Sizewell Gap, near King Georges Lane – Sizewell, 6 June
- Church Lane / Church Road – Friston 7 June
- A1094/B1069 Junction – Friston, 8 June = the "Leiston turn-off"
- B1121 near Kiln Lane - Friston, 9 June
- Grove Road south – Friston, 12 June
- Snape Road - Friston, 13 June
- Aldeburgh Road – Aldringham, 14 June
- B1353, near Church Lane – Aldringham, 15 June

The traffic management will include two-way temporary traffic lights to enable single lane traffic. On the A1094/B1069 junction, three-way traffic lights will be in place. These works and associated traffic management are in agreement with Suffolk County Council.

You can find more information on the exact locations of our works on our Project Activity Map.
